VISION & MISSION OF THE INSTITUTE

VISION

To emerge as a center of excellence by providing industry oriented innovative technical education so that the products of the institution are able to combat the global challenges and contribute to the sustainable development of the society.

MISSION

To accomplish its unique vision, the Institute has a far-reaching mission that aims:

- ✓ To provide quality technical education through effective teaching learning process.
- ✓ To foster creativity, team work and problem-solving skills among the students.
- ✓ To collaborate with industry for hands-on training and employability.
- ✓ To nurture skill based entrepreneurship oriented learning.
- ✓ To instill ethical values and social responsibilities.

VISION & MISSION OF THE DEPARTMENT

VISION

To cultivate a learning environment centered on core Computer Science and Engineering discipline, nurturing diploma engineers capable of adapting to technological changes and contributing to sustainable societal development by designing ethical technological solutions.

MISSION

To provide a modern, application-focused technical education in Computer Science and Engineering that encourages critical problem-solving, robot industry partnerships, entrepreneurial mindset, and ethical technological development.

- ✓ Deliver rigorous, application-oriented Computer Science and Engineering education.
- ✓ Foster innovation and practical problem-solving skills through hands-on experience.
- ✓ Forge strong partnerships with industry for curriculum relevance and real-world exposure.
- ✓ Install professional ethics and a spirit of entrepreneurship in future engineers.

PROGRAM EDUCATIONAL OBJECTIVES (PEOs)

COMPUTER SCIENCE & ENGINEERING DEPARTMENT

THE PEOs

01

DIPLOMA ENGINEERS WILL POSSESS A STRONG FOUNDATION IN CORE COMPUTER SCIENCE AND ENGINEERING PRINCIPLES, ENABLING THEM TO ANALYZE, DESIGN, AND IMPLEMENT EFFECTIVE COMPUTING SOLUTIONS FOR REAL-WORLD APPLICATIONS.

02

DIPLOMA ENGINEERS WILL BE EMPLOYABLE IN VARIOUS DOMAINS OF INFORMATION AND COMMUNICATION TECHNOLOGY, DEMONSTRATING ADAPTABILITY TO TECHNOLOGICAL ADVANCEMENTS AND A COMMITMENT TO LIFELONG LEARNING.

03

DIPLOMA ENGINEERS WILL EXHIBIT PROFESSIONALISM, TEAMWORK, EFFECTIVE COMMUNICATION, AND ETHICAL RESPONSIBILITY WHILE CONTRIBUTING TO SUSTAINABLE SOCIETAL AND TECHNOLOGICAL DEVELOPMENT.

04

DIPLOMA ENGINEERS WILL DEMONSTRATE INNOVATION AND AN ENTREPRENEURIAL MINDSET, UTILIZING THEIR TECHNICAL SKILLS TO INITIATE OR CONTRIBUTE TO SELF-SUSTAINING VENTURES.

ABOUT COMPUTER SCIENCE AND ENGINEERING DEPARTMENT

Computer science & Engineering, a branch of engineering that turns ideas into solutions using logic, technology, and creativity. Its main aim is to develop technical skills and logical thinking in students. The department focuses on building a strong foundation in computing while also keeping students connected with modern technologies.

Students are introduced to core subjects such as programming, data structures, databases, web technologies. Along with classroom teaching, equal importance is given to practical learning through computer labs, projects, and hands-on sessions that help students apply concepts in real situations. Through workshops, technical activities, certifications, and project work, the department encourages continuous learning and practical exposure.

With a balance of theory and practice, the Department of Computer Science aims to prepare students for higher studies, industry opportunities, and responsible careers in the field of technology.

PRINCIPAL'S DESK

My Dear Students,
Success is built through consistency, resilience, and a calm belief in one's own potential. This magazine reflects that spirit a collection of disciplined effort, creativity, and quiet determination. Each contribution reminds us that true growth happens when we strive with focus, integrity, and purpose. Challenges may come, but confidence and hard work turn them into opportunities. As you read these pages, let it inspire you to stay grounded, think clearly, and move forward with grace and strength. Keep learning, keep improving, and carry yourself with dignity in every step you take toward your dreams. The journey ahead is yours to shape.

I congratulate HOD, Teaching and Non-Teaching staff, editorial board and students of the Computer Science and Engineering Department for bringing the "Code & Beyond" Wish you All The Best.

With Regards.

Dr. Thakur Sanjay Kumar
Principal
G. P. Muzaffarpur

ACADEMIC DEAN'S DESK

We are extremely pleased to bring out the Magazine of Computer Science and Engineering of our institution GP Muzaffarpur. This is one of the premier technical institutions in Bihar. It has the proud privilege of being the centre of quality education laying utmost thrust on practical as well as theoretical education. With the paradigm shift

in technical education, with the changing demand of industry, we groom our students in such a way that they are able to face the challenges posed by rapid revolution in the field of technology.

Since the students enrolled in our institute come from remote rural areas, they are often found lacking in effective communication skill. For this purpose we have a modern language Lab wherein students are trained to enrich their communication skill, in order to install confidence in our students we organise debate, extempore elocution competition regularly. We feel elated to say that our effort has born fruits. The sound technical knowledge of our products anchored by their effective communication skill has made our institute the fond destination of many a private firm.

We are still striving for a brighter future of our institute. We are confident under the able leadership of our Principal Dr. Thakur Sanjay Kumar who leaves no stone unturned for the betterment of the institute, we shall climb greater heights in days to come.

In course of our endeavor to bring out this magazine we owe obligations to many. First of all we are extremely grateful to our Principal Dr. Thakur Sanjay Kumar whose constant guidance and encouragement has been a perennial source of inspiration. We are also thankful to our learned teachers and students for their valuable suggestion and contribution without which we have never been able to give shape to this magazine

Dr. Sudhir Prasad Singh
Academic Dean
G. P. Muzaffarpur

FROM THE HOD'S DESK

Dear Students,
It gives me immense pleasure to witness the publication of our departmental magazine. A dedicated space conceived and brought to life by the students and faculty of the Computer Science and Engineering (CSE) Department, Government Polytechnic Muzaffarpur.

While our curriculum rigorously trains students in coding and algorithms, we recognize that true excellence requires more than technical skill. This magazine serves as a crucial platform to celebrate the unseen talents of our students, their creativity and literary flair.

To our students, always remember:

"Be a continuous learner. Technology will change rapidly, but your ability to adapt and solve complex problems will be your greatest professional asset."

By providing an outlet for creative expression, this magazine helps our budding engineers develop essential soft skills, which are directly transferable to successful system design. I am confident this initiative will play a vital role in the holistic development of every student.

I wish everyone a path filled with innovation and success!

Mr. Suman Shekhar
HOD(Computer Science
& Engineering

Message From The EDITOR

It is my great pleasure to present before you the current yearly edition to you all.

Thanks to my editorial team, honorable staff members and all those to whom who with their loving and sincere efforts make this happen.

The magazine focus on relevant question on how AI will be going to impact jobs in next 5-10 years and finally giving safe solution to the question as well.

Other highlights of the magazine are glimpse of our campus life from classroom to various clubs which allows you to meet like-minded people, pursue various interests, build long-lasting connections with mentors and peers, and develop a strong skill set that can help you in your post-college career.

Coding: The Art of Engineering

“Coding is the canvas, logic is the brush, and engineers are the artists who paint the future.”

— Sweta

In today’s rapidly evolving world, Artificial Intelligence and emerging technologies are transforming how we learn, work, and innovate. For diploma students, this is the right time to explore new tools, build practical skills, and think beyond textbooks.

Coding is not just writing programs; it is training the mind to think logically, create solutions, and imagine possibilities. Every small step in learning today can lead to innovations tomorrow.

The future belongs to those who learn continuously, embrace challenges, and dare to innovate.

Voices of Experience

Code. Create. Innovate.

**Md. Naiyer
Hoda**
Lecturer
(Computer Science &
Engineering)

“Coding is today’s language of creativity. All our children deserve a chance to become creators instead of consumers of computer science.”

— Maria Klawe

Step into the world of technology with the Diploma in Computer Science & Engineering at Government Polytechnic Muzaffarpur, where logic meets creativity and ideas turn into innovation.

Our programme provides strong, application-oriented learning in core areas of Computer Science, including programming, algorithms, artificial intelligence, machine learning, and cybersecurity. With modern laboratories, hands-on projects, practical learning, and industry exposure, students develop the skills needed to meet evolving technological demands.

Beyond technical knowledge, we encourage problem-solving, creativity, teamwork, and innovation, preparing students to become confident, skilled, and future-ready technology professionals.

Voices of Experience

Mr. Arvind
Kumar

Lecturer

(Computer Science &
Engineering)

Think. Code. Solve.

“Everyone should learn how to code, it teaches you how to think.”

— Steve Jobs

Engineers are recognized as solution finders.

In other terms, I can express that by utilizing logic and mathematical algorithms, I can convert intricate problems into sequential instructions.

Nowadays, technology is essential in everyone's everyday life. Artificial intelligence (AI) transforms our thought processes. Students need to stay current with new technologies and step outside their comfort zones.

Voices of Experience

Mr. Nikhil
Kumar
Lecturer
(Computer Science &
Engineering)

Learn. Grow. Serve.

“Learn to grow, skill to serve, and innovate for a better society.”

— Nikhil Kumar

Education is not just about earning a degree, but about shaping character, competence, and commitment to society.

Continuous learning and strengthening technical knowledge empower students to solve real-world problems and create meaningful impact.

Let curiosity guide you, skills define you, and integrity lead you toward a life of purpose and service.

Artificial Intelligence in The Modern Job Market Opportunities and Challenges in 2025

As we move deeper into 2024, Artificial Intelligence (AI) continues to revolutionize the job market in profound ways. AI technologies, such as machine learning and natural language processing, are not only automating routine tasks but also creating new job opportunities and transforming various industries. This rise of AI in the workplace is reshaping the skill sets required for many careers, bringing both opportunities and challenges to current and future professionals.

One of the most significant impacts of AI is its role in automating repetitive tasks. This automation allows companies to improve efficiency and reduce costs, but it also shifts the demand towards more complex, creative, and strategic roles. Jobs in areas like data science, AI ethics, cybersecurity, and AI software development are in high demand. However, there is an increasing emphasis on acquiring new skills such as programming, data analysis, and AI model management to stay competitive in this rapidly evolving field.

One of the most significant impacts of AI is its role in automating repetitive tasks. This automation allows companies to improve efficiency and reduce costs, but it also shifts the demand towards more complex, creative, and strategic roles. Jobs in areas like data science, AI ethics, cybersecurity, and AI software development are in high.

Dealing with Comparison and Competition

Why Do Students Compare Themselves?

Students often compare themselves with others because they are surrounded by competition in academics, achievements, and social life. From a young age, marks, ranks, and performance become a way to measure success, which naturally leads to comparison among peers.

Another reason is the influence of social media, where people usually share only their best moments. Seeing others succeed can make students feel like they are falling behind, even when they are doing well in their own journey.

Peer pressure and expectations from family and society also play a role. Students may feel the need to match others to gain approval or feel accepted. This creates a constant urge to measure their progress against someone else.

In reality, every student has a unique path, strengths, and pace of growth. Understanding this can help reduce unnecessary comparison and build a healthier mindset focused on personal improvement.

The Role of Students in Creating a Better Society

Social Responsibility of Students

Students play an important role in building a better society. As learners, they gain knowledge and skills that help solve real-life problems and spread awareness. Education makes them responsible and informed citizens.

Students also promote good values like honesty, discipline, and respect. Their behavior influences others and helps create a positive environment. In addition, they can bring social change by raising awareness about issues like pollution, equality, and education.

By participating in community service and helping others, students develop responsibility and compassion. Their energy and fresh ideas also contribute to progress and innovation.

In conclusion, students are the future of society. With education, good values, and active participation, they can create a better and more developed world.

Digital Detox

Disconnect to Reconnect

These days, many of us don't begin our morning with sunlight - we wake up to the glow of phone screen. Almost as soon as our eyes opens, we unlock our phones to check messages, reels, classes, news, and endless notifications. Technology has definitely made life easier and faster, but somewhere along the way we have lost our pause button. We keep scrolling - and scrolling, without realizing how much time and peace we are losing. Now the question comes:

" What is a Digital Detox? "

A Digital Detox means taking a break from screen and digital devices. It doesn't mean throwing your phone away quitting social media forever.

It is more like restarting a slow computer for better performance. A short pause that helps everything work better, and let's you feel calmer, more focused, and more present in the real world

If you pause for a moment, you'll realize how often you open your phone " just for a minute" and suddenly half an hour disappears. We keep moving from one app to another, looking for anything new, while notifications constantly pull us away from real life things like studies, conversations etc. Our

Students Editorial Section

brain stays active all the time, but rarely calm.

There is a beautiful Saṃskṛta śloka that explains this well:

अति रूपेण वै सीता चातिगर्वेण रावणः।
अतिदानाद् बलिर्बद्धो ह्यति सर्वत्र वर्जयेत्॥

--चाणक्य

Meaning : Too much of anything becomes harmful. Sita's great beauty led to trouble, Ravan's excessive pride destroyed him, and king Bali was bound because of giving too much. So, excess in anything should be avoided.

Just like this shlok explains, the problem is not technology, the problem is too much of it. But when we lose the balance, life starts to feel loud, tiring, and overwhelming.

A Digital Detox reminds us that the world outside our screen is real, peaceful, and beautiful. When we put the phone aside, time slows, our mind clears, and we notice small joys like conversation, a walk, a cup of chai, quiet study, the weather.

Simple steps for Digital Detox :

- Keep phone away while studying
- Turn off unnecessary notifications
- Spend at least an hour without phone daily
- Try to spend a day without phone each week

Slowly the habit of checking phone constantly weakens, and you'll start to feel many changes in life. Always remember -

***" you Should control your device -- don't let
the device control you "***

Cybercrime:

A growing digital threat

Today the internet is a part of everything we do - studying, chatting with friends, watching videos, shopping, even banking. But just like the real world has criminals, the online world has them too. When someone misuses technology to cheat, steal, threaten, or harm others, it's called cybercrime.

Common forms of cybercrimes:

Cybercrime can look simple, someone hacking an account, stealing passwords, sending fake messages to trick people for money, bullying online, or spreading viruses. But the damage is real. People lose money, personal data gets misused, and many even go through stress and fear because of it. And the truth is, anyone can be a target students, teachers, families, businesses anyone who is not careful online.

Why people do it?

Mostly for money, revenge, or to steal information. Because people feel hidden behind screens, they think they won't get caught. But cybercrime is illegal and punishable.

Cybersecurity: Protecting ourselves from cybercrime is called cyber security

Students Editorial Section

Simple ways to stay safe:

- Use strong and unique passwords
- Enable two factor authentication
- Do not share OTPs and bank details
- Avoid unknown links and messages
- Avoid public Wi-Fi for important works

What to do if it is already happened?

First of all if any cybercrime happens, don't panic. Stay calm! Don't stay silent, report to any trusted elder or any legal authority. Report to the cyber security office.

Conclusion:

The internet is powerful and useful — but it must be used wisely. Staying alert and following safe online practices helps us stay protected from cybercrime.

THE ARCHITECT OF INNOVATION

Why I Chose CSE and How You Can Master It

ANKIT KUMAR (2025-CSE-05)

Introduction

Choosing a branch in engineering is a defining moment for any student. For me, choosing Computer Science & Engineering (CSE) wasn't just a random decision; it was a choice driven by a passion for the digital future. Many people think CSE is just about sitting in front of a computer, but I realized it is actually the art of problem-solving.

Why I Chose CSE?

I chose this branch because it is the fastest way to change the world. Here are a few specific reasons:

- **The Power of Creation:** With just a laptop, you can build software that impacts millions globally.
- **Constant Evolution:** From AI to Blockchain, CSE is always evolving, ensuring you never stop learning.
- **Universal Impact:** Technology is the backbone of every industry—from Healthcare to Space Exploration.

Navigating the Modern Era

The tech landscape has changed. To be the "best" in today's world, you need to go beyond the syllabus. Here is my advice for the modern CSE student:

1. **Embrace AI** – Learn to use AI tools, prompt engineering, and integrate models like LLMs into real applications.
2. **Choose a Specialization** – Explore focused domains like Cybersecurity, Cloud, or DevOps to stand out.
3. **Build in Public** – Share projects on GitHub and LinkedIn; your digital profile matters more than a resume.
4. **Develop Human Skills** – Strengthen critical thinking, system design, and emotional intelligence.
5. **Contribute to Open Source** – Gain real-world experience by collaborating on global projects.

Conclusion

CSE is not just a game of 0s and 1s; it is a medium to turn dreams into reality. If you have the logic to code and the curiosity to keep up with the modern world, this branch will be your greatest adventure.

Artificial Intelligence and Future Jobs Challenges

MD NAIYER HODA

Lecturer (CSE)

Government Polytechnic
Muzaffarpur

We all may have seen Matrix, RoboCop, The Terminator movie series where machine try to enslave us, compete with us and defeat us. The movie imbues us with two different kinds of feelings that either technological advancement will be going to create a hell for us or it will be just a tool to make our life easier.

Reality Ahead:

Social media, online platforms, latest Hollywood movies based on science fictions gives a very different picture of the world after 20 to 30 years. Traditions, old social and ethical values, customs, cultures, religions which exist today will be replaced by new values, belief systems. My point to focus is on relevance of skill which we acquire today will be how much useful after 5-10 years especially in job market. Will ChatGPT, automation and other AI tool will completely replace human professionals? How much we have prepared ourself for a major shift in job demands in coming future?

The Answer :

The next 5–10 years will bring rapid changes in jobs due to AI, automation, digitalization, and new industries. Coping well means preparing, adapting, and staying ahead rather than fearing change. Some of points I like to highlight are as follows: -

- Critical thinking
- Problem solving skills
- Automation awareness
- Stay flexible
- Upgrade your skill according to technological developments

Conclusion :

Lifelong learning will always be required to stay along with the changing job requirements.
